

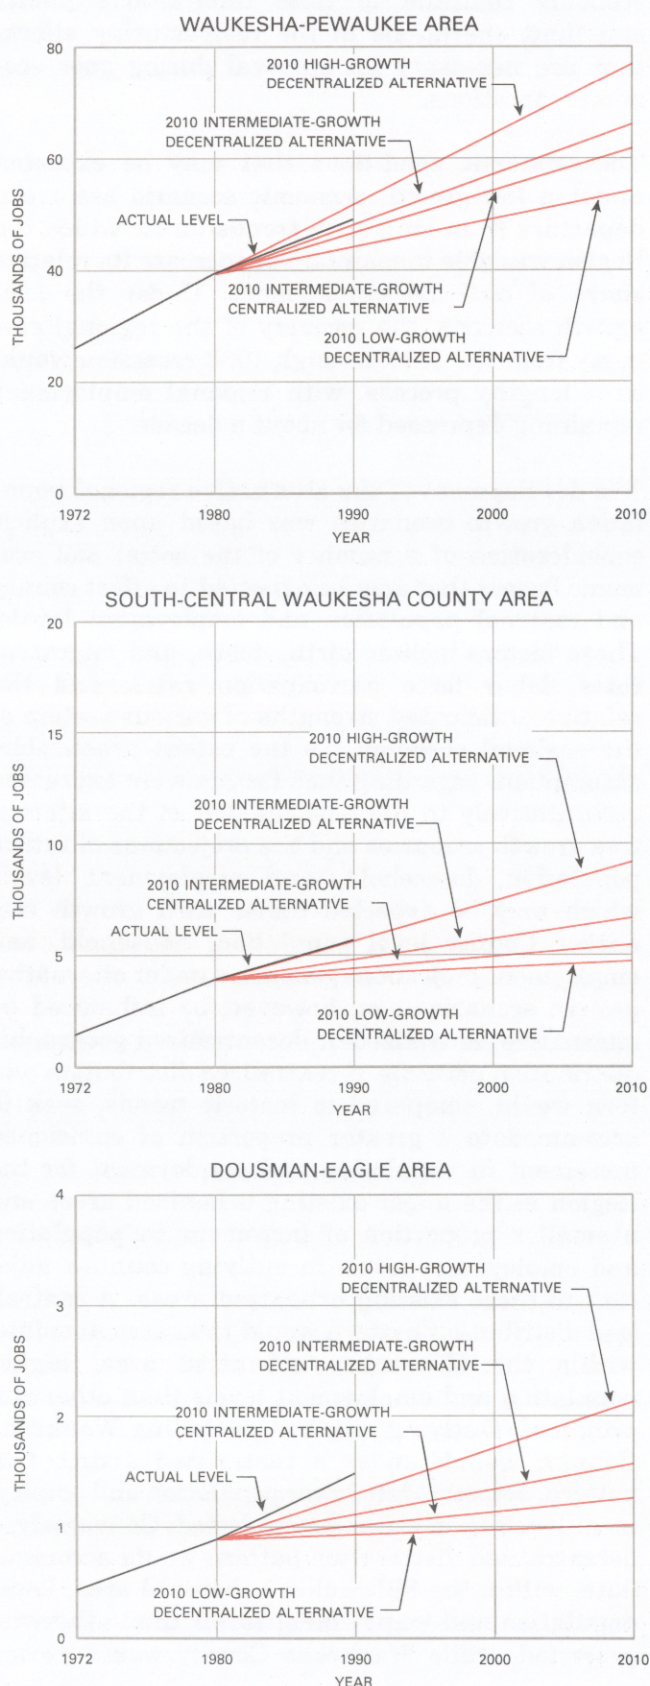

Figure 97 (continued)

thus by 1990 had already exceeded the 2010 employment level envisioned for this PAA under the intermediate-growth centralized alternative. The year 2010 employment level in this PAA could, however, be as low as 4,800 jobs, about 900 jobs, or 16 percent less, than the 1990 level, under the low-growth alternative, or as high as 9,200 jobs, about 3,500, or 61 percent, greater than the 1990 jobs level, under the high-growth alternative.

- The Dousman-Eagle PAA has also experienced a significant increase in jobs in the last decade and it, too, exceeded the level anticipated under the intermediate-growth centralized alternative by 1990. The year 2010 employment level in this PAA could, however, be as low as 1,000 jobs, about 500 jobs, or 31 percent, less than the 1990 level, under the low-growth alternative, or as high as 2,100 jobs, about 600 jobs, or 43 percent, more than the 1990 level, under the high-growth alternative.

#### UTILIZATION OF ALTERNATIVE FUTURE POPULATION, HOUSEHOLD, AND EMPLOYMENT LEVELS IN THE PREPARATION OF THE WAUKESHA COUNTY DEVELOPMENT PLAN

The alternative future population, household, and employment levels presented here are important considerations in the preparation of a long-range development plan for Waukesha County. These forecasts set the overall scale of development which must be accommodated under the alternative plans and provide one basis for plan evaluation. Because of the complexity of a planning process involving 38 individual communities, a process which must consider the manner in which local land use plans prepared to date can be accommodated in the County development plan, the selection of forecast population, household, and employment levels must be based in part upon the alternative future projections set forth in this chapter; in part upon the currently adopted local land use plans; and in part upon population, household, and employment levels that would be consistent with objectives, principles, and standards set forth herein. The final probable future population, household, and employment levels attendant to the Waukesha County development plan are accordingly set forth in Chapter X of this report.
